PROJECT SYNOPSIS
AI – POWERED CHATBOT FOR SCHOOL HELPDESK

SJR PUBLIC SCHOOL, Rajajinagar,Bangalore
GRADE 6, MINUTHAA J

PROBLEM :

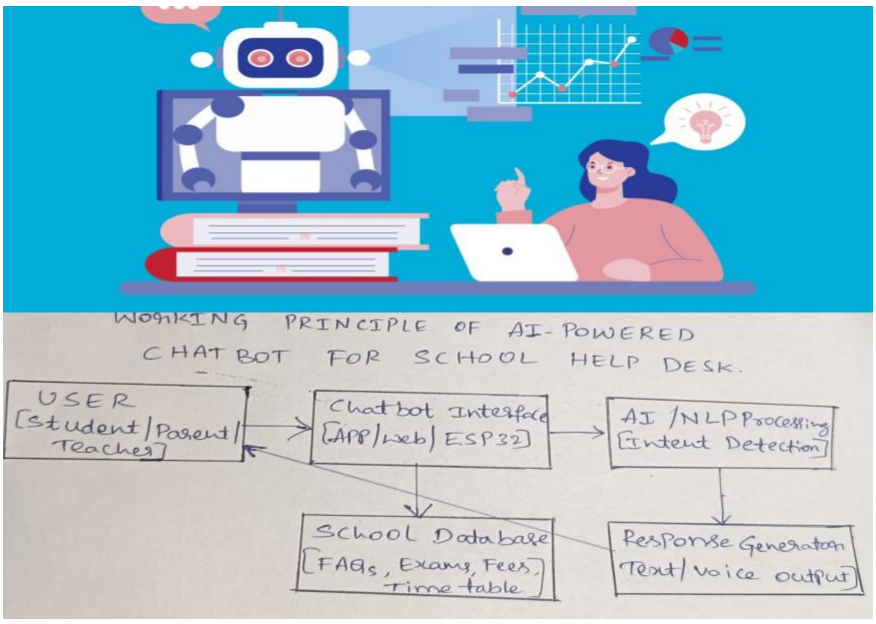

In most schools, students and parents struggle to get quick answers to basic questions like exam schedules, homework updates, fee deadlines, or school events. Most schools depend on manual helpdesks or teachers for this, which can be time-consuming and inefficient. This leads to delays, confusion, and excessive pressure on teachers and staff. The absence of a real-time help system results in communication gaps within the school ecosystem.

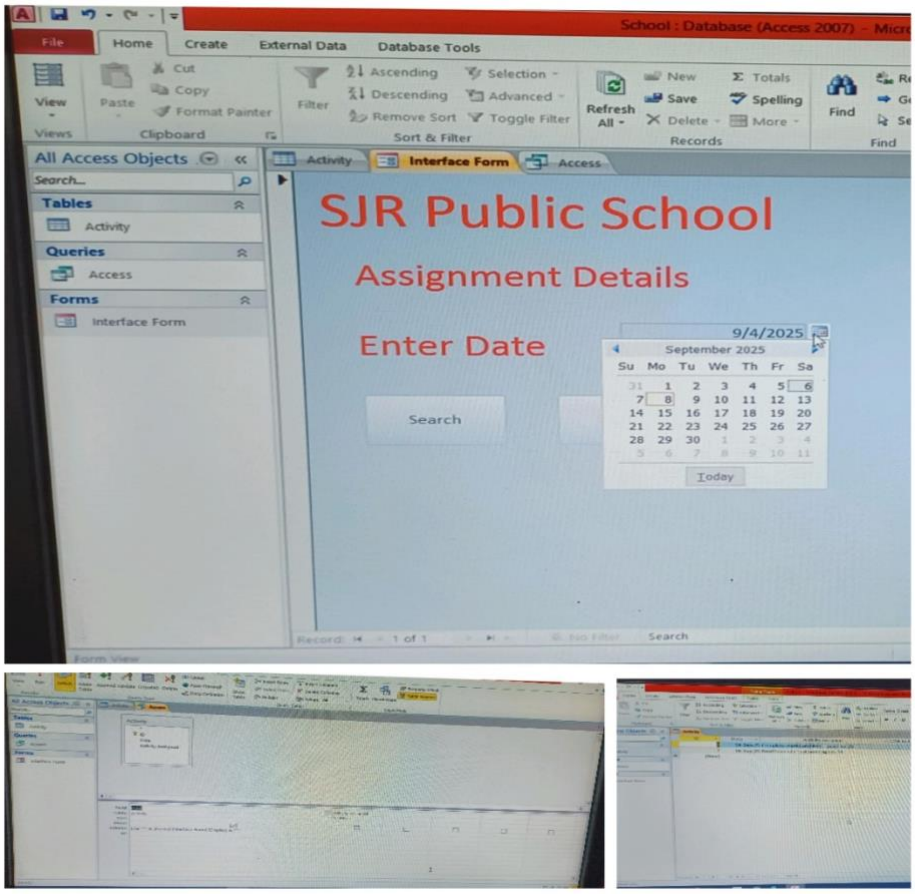

INNOVATION IDEA:

The idea is to create an AI-powered chatbot that works as a virtual school helpdesk. It can answer frequently asked questions automatically using Artificial Intelligence and Natural Language Processing. The chatbot will be available 24/7 on the school website or mobile app. Users can ask questions in simple language, and the bot will give instant and accurate responses by accessing pre-fed school data.

WORKING PRINCIPLE :

The chatbot will use NLP (Natural Language Processing) to understand queries. It will match the questions with pre-fed school information (FAQs, timetable, announcements).
It responds instantly in text (or voice-based in future versions).
The chatbot can be created using tools like Dialogflow, Rasa, or Python with chatbot libraries.

Application:

- It Reduces workload of school staff and Saves time for teachers and administration.
- It Provides students/parents with instant help. Improves communication and management. It Can be used in rural and urban schools alike. It Encourages adoption of AI in education.
- 24×7 availability for students and parents
- Saves time for teachers and administration
- Improves communication and transparency
- Cost-effective and scalable to other schools/colleges
- Supports Digital India initiative and promotes AI in education
