Name :- Ashith .A.S
Class :- 9th 'B'
School :- Bharatiya Vidya Bhavan, Mysuru.
Phone No :- 9482641601.

Date :- 20/07/2026.

(It could be selected implemented nurse ambulances could have a button triggering in control centre) 98

Idea :- We can see that ambulance will be carrying patients will be stucked in a Traffic. so, the Patient will suffercating so, we should create a signal dictator in the ambulance and in the traffic police chamber which will be having in the Traffic. When the ambulance driver press or send a signal to the traffic police he will be able to clear the signal befor 5 minutes before the ambulance reaches the traffic. so, the amb -ulance driver will be able to take the patient on ~~the~~ time to the hospital.

By this Idea it will be helpful for the ambulance driver to take the Patient on ~~the~~ time.

Problem: Ambulances carrying critical patients frequently get stuck in heavy traffic, leading to dangerou medical delays.

Solution: Implement a wireless signal system in ambulanc that allows drivers to remotely trigger and clear upcoming traffic signals ahead of time
