PEPS

look into this

In the Hospital we can atach a Robotik hand at the bed so that if the patienct can press the bacttor and the Robotik hand can go and tack the Glass or something and bring to the patienct

Problem → Patients feel difficult to take Necessery things when they are bed ridden

Solution → Need one robotic ~~hand~~ hand to the bed, it should be attached to the bed, if we press button it should bring glass, or something like that to the patient
