Kitchen heat to electricity

Idea: Conversion of heat energy into electrical energy

* Usuage: Using the heat generated in kitchen and its conversion into electricity for domestic consumption
* Effecient use of heat instead of its wastage.
* Wherever a heat source is available, it can be converted into electricity used to charge phones and other electronic gadgets in rural areas and help to communicate
*

Title.
"Using heat energy to home appliances".

Problem
"In kitchen the heat energy is produced. So it is wasted." even some kitchen's like marriage/ hotels there more enge heat energy is produced.

Solution
So convert that heat energy into electrical energy we can use that for homes like turning on light, fans and home appliances."
