Problem: coconut trees are so long and have high risk to climb and pluck. that it can take up a lot of so many persons.

Soln: If we put a net to the upper body of the coconut tree. in circular shape & make it narrow from bottom. Farmers can pluck through a long stick & then coconuts are fall through gravity. we can put that narrow opening from bottom. Put a box so the coconuts were also safe. From that trees it can use for both. raw coconut & mature coconut
