1) We are using petrol for vechiles and the cost is increased so instead of using petrol vechiles, we can invent solar vechiles when sunshine is more and petrol vechiles in rainy and winter season.

2) All in one vechiles, we can invent a vechiles in solar, petrol and electricity so we can charge and we can heat the vechile for travelling by ~~sola~~ and petrol when traveling far away.

Problem! Petrol for vehicles is very much costly.

Solution! We need a All in one vehicle where it can run through

Solar, petrol & electricity. So we can charge or we can heat the vehicle and also can put petrol.
