* Problem:- Some we can't read books without Glasses so they wan't them to be fixed to a stage that they can read while sleeping. (11)

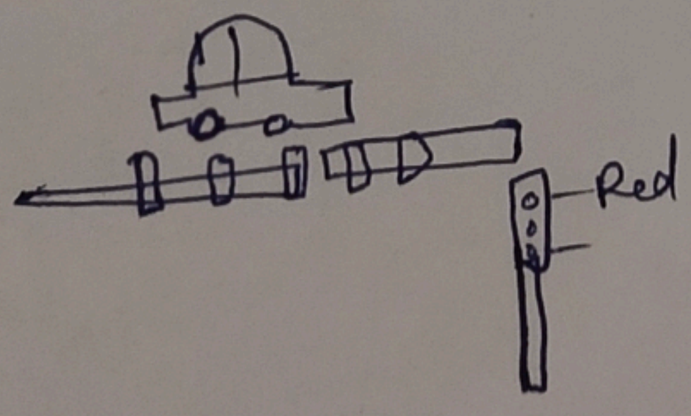

Solution :- If we put a expandable rubber Silicon flexible material to the stick of a glass we can bend them while sleeping like

stick  -> glass

So we have to put a bendelble stick here

So we can bent it like  like this & sleep one side if we want to do two things at a time like reading & watching T.V we can bend  like the body so  if u wearing like this we can were  like fit the body by streacting it.

(2) Idea :- If we see a trafick signal we will not stop some time So we skip the signal So if we invert a metal rod like railway gates we the signal is turned red the Poles should automatically closed
