look into this idea ⑧

Problem Statements :

* Mixing disposal of dry, wet, electronics and sanitary wastes.
* Disposal of sanitary pads everywhere like on streets.

Solution :

* An automatic sensor to detect dry, wet, electronics and sanitary wastes so that if we mix the waste together the sensor beeps so we can separate the wastes according to the bins.
* A Recycle bin for used pads like if we submit used pad it gives a new, recycled pad or a new pad for free incase of emergencies.

Benificiary :

* Waste segrigation and useful for garbage collectors as it ~~reduce~~ reduces their work.
* Used in school, colleges and in public incase of emergencies.

Can improvised this idea like for any type of waste they submit something will be given back which will be benefited
