Our idea :-

problem

Many people are suffering because of dehydration and it is inconvient to carry the water bottle.. Poor people may not get clean and purified water to drink .

Soln

So we want to invent a pill containing water and diffrent kinds of fruit natural flavours. They should be cheap, colourful and should contain more than 80% of water in the pill .

The strip of pills should be small and easy to consume and mainly be cheap and convineant to carry.

With this we can help people from dehydration

Thank you!
