Problem,
When I came through the Bell idea I felt that could be harmful also. as the vibration takes place & if any person having headache is sleeping that could creat a problem.

Solution,
We can add light to the Bell so that the person inside gets to know. and we can also add ~~Sound~~ Speaker. alarm to the Bell.

Why the solution

the people who can't hear can get to know when the light- senses the Bell. and the people who can't See can get to know when the speaker senses the Bell. and also if the person inside is sleeping can get to know and open the door.
