No.	Idea ID	Title	Student Name	School Name	Problem Statement	SolutioN)	End Users
1	IDEA-2026-08DXW3	Irrigation Regulator	Puneeth.R	Mahabodhi School	Different plants or crops have different needs and amounts of water.	Put an irrigation regulator in irrigation pipes for different crops so we can regulate the exact amount of water delivered to each crop	Farmers and agricultural workers
2	IDEA-2026-0AMHNH	Cricket Guru AI	RUDHIR	DAV PUBLIC SCHOOL HEHAL RANCHI JHARKHAND	Many aspiring cricketers, especially in schools and local academies, do not have access to experienced coaches or affordable performance analysis. Traditional coaching is subjective, expensive, and cannot provide detailed, data-driven feedback after every practice session.	Cricket Guru AI is an AI-powered virtual cricket coach that analyzes batting, bowling, and fielding videos using computer vision and machine learning. It detects technical errors, evaluates player movements, provides instant personalized feedback, tracks performance over time, and generates customized training plans.	School students, young cricketers, cricket academies, amateur and professional players, coaches, sports teachers, and parents looking for affordable, AI-powered cricket trainin
3	IDEA-2026-0EYJJQ	Lumina: The Light Beyond Our Eyes	Samanvitha G	D. A. V public school	Visually impaired individuals often face challenges while navigating unfamiliar surroundings, identifying obstacles, and accessing printed information such as signboards, notices, labels, and books. Many existing assistive technologies can be expensive or dependent on internet connectivity.	Visually impaired individuals often face challenges while navigating unfamiliar surroundings, identifying obstacles, and accessing printed information such as signboards, notices, labels, and books. Many existing assistive technologies can be expensive or dependent on internet connectivity.	Visually impaired people
4	IDEA-2026-1IL5QD	AgniRakshak AI	MK Taran		Forest fires can spread rapidly and cause loss of forests, wildlife, biodiversity, property, and human lives. In remote forest areas, continuous monitoring is difficult, and fires may not be detected early enough for emergency teams to respond quickly.	Create a network of AI Forest Guardian sensor stations distributed throughout a forest. Each station continuously monitors environmental conditions: Temperature + Humidity + Smoke + Gas + Wind + Light The data is sent to a central AI system.	“Forest departments, firefighters, communities living near forests, wildlife, and the environment will benefit from this system. It will help detect potential wildfires earlier, enable faster emergency response, protect human lives and wildlife, and reduce damage to forests and ecosystems.”
5	IDEA-2026-30WU0I	Local landslide prediction app using machine learning models	Thanmaya C.C		This app is going to solve the issue of unpredictable landslides and the devastation caused by them. At present, only vague regional predictions of landslides are available to the public. This app will give more accurate landslide probability and warnings at the user's specified location.	This will use a machine learning model AI to collect data about landslides, geology, rainfall intensity, soil type, etc from verified sources only, to evaluate the chances of a landslide and give the required warning to the user. It will be user-friendly and be in an easy-to-understand format, with the app available in multiple languages.	The people living in hilly regions and by the mountainside will benefit greatly as the chances of a landslide have become a great threat to them.
6	IDEA-2026-3PV5JL	Plant-Based Spoilage Indicator Sticker	Darshith.D	Bharatiya Vidya Bhavan vijay nagar 1st stage, Mysore -570017	Most of us rely on the printed "Best Before" date on a carton or bottle, but those calendar dates are just rough estimates. Because of that, families, supermarkets, and clinics toss out millions of pounds of perfectly good perishables every week.	OUR SOLUTION: BIO-CHROMA STICKER Core Idea: We developed a non-toxic, compostable smart sticker made entirely from food-grade plant extracts and biopolymer films. Placed inside packaging headspace, it reacts to spoilage gases and permanently changes color— acting like a direct traffic light so anyone can check freshness at a glance.	Common people and manufacturing industries from law suits
7	IDEA-2026-3UAKOS	Refillable Push-Button Toothpaste Toothbrush	Roosa Zainab	st.joseph's school , rajivnagar	When brushing our teeth, we have to carry both toothpaste and a toothbrush separately	Travelers, students, and everyday individuals looking for a convenient all-in-one teeth-brushing tool	

8	IDEA-2026-3YA0Z3	Fresh Fruit Scanner	Vishwasa gowda S	Mahaja Public School	Finding good quality fruits or products before buying them.	Making a device that helps collectively select or verify good products	Houses, students, restaurants, and shopkeepers.
9	IDEA-2026-48JZL7	Wall-mounted Fan Desert Climate Blocks	Shravani. R	Bharathiya Vidya Bhavan	In desert areas, houses have upright walls that easily let hot air in during the day, making it feel hot, while nights become extremely cold.	Install specialized wall-mounted blocks containing fans that regulate indoor temperature by converting incoming hot air into cool air during hot days, and reversing the process to warm up cool air during cold nights.	Residents living in desert areas and extreme climates.
10	IDEA-2026-4LAH43	Identification of ticks in pet's hair	Amuktha M Sowha	Navkis Educational Centre	Identification of ticks in pet's hair.	Insect or tick detector in pet's comb inserted in the handle of the comb connected to bristles.	Pet owners
11	IDEA-2026-4OFJ4J	The Auto-Smothering Dual-Gas Spike (ASD-Spike) for Landfill Fires	Hitendra	Sacred Hearts Sr. Sec. Public School	The Problem India is facing a severe municipal disaster with approximately 3,000 overflowing landfills, such as the Ghazipur site in New Delhi, which alone receives over 2,000 tons of garbage daily. As organic waste undergoes deep subterranean decomposition, it generates immense volumes of landfill gas typically composed of 45% to 60% highly flammable methane and 40% to 60% carbon dioxide.	2. The Innovation The Auto-Smothering Dual-Gas Spike (ASD-Spike) is a 140% original, zero-power mechanical system designed to neutralize these fires before they erupt.	The Benefit When a subterranean hot spot begins to dangerously overheat, the thermal plug melts. This triggers an immediate, self-extinguishing drop, dumping the highly concentrated, heavy carbon dioxide—which the garbage itself produced—directly onto the overheating trash. Because carbon dioxide displaces oxygen, it instantly smothers the localized heat pocket and stops the fire from ever starting. This provides a completely autonomous, zero-cost disaster management solution that requires no electricity, internet sensors, or heavy machinery. It totally eliminates the need to pump water into landfills (which creates toxic groundwater leachate) and effectively stops the catastrophic air pollution that plagues India's megacities.
12	IDEA-2026-53JCYV	Sensor alarm for broken water pipe/water wastage	Naveen Raj	Chamundi Makkala Mane	Water pipe is broke water will waste because of leakage noone will take responsibility	Add water leakage sensor to the pipes that detect leakage or breakage and immediately send an alert to the responsible person	Society
13	IDEA-2026-5ES8NC	Transparent Petrol Dispensing Gun with Measurement Scale	Firdos	Sai Huda Excellence	We can't see whether they are filling petrol or gas properly.	Make the petrol dispensing gun transparent and include a scale or rule so that measurements can be updated for better use and for genuine use.	Vehicle owners and fuel station customers
14	IDEA-2026-5Q0D7B	Low cost manual plastic to paver block	Rekha Mamatha		Rural areas lack formula municipal waste management systems leading to the accumulation of non recyclable plastic waste (single use films, multi layer packings and discarded contains). This waste is frequently burned in open air , releasing toxic fumes ,or left clog local waterways and soil.	swaraj" is a decentralized manually operated ,low emission melting dress designed for off grid rural communities .it converts shredded non recyclable plastic waste into heavy duty paving blocks by using a specific ratio of melted plastic as a binder combined with locally sourced sand or quarry dust	Rural communities and local residents
15	IDEA-2026-5YGADF	Automatic Safety Wall / Retractable Platform Barrier	Karan Jayachandra M B	V K Public School	Passengers sometimes run toward a departing/arriving train and may fall from the platform onto the track.	Install an automated retractable safety wall/barrier along the platform edge. How it works: The train arrives and stops at the designated position.	Public

16	IDEA-2026-67EN4L	Smart Tree Cutting Alarm System	Impana P	Navkis Educational Centre	Trees are being cut illegally which is harmful to the environment	Small sensor is attached to the tree If someone tries to cut it. It detect te vibratation and given an alarm I also send msg to the village or forest officer so they can take action quickly. This system can be used for roadside trees, parks, school.	Home
17	IDEA-2026-6983LE	Smart Electronic Posture Chair with Heater and Cooler for Students	Prithvi D	St. Joseph's central School, Yelwal	While sitting in the class for a long time, students get neck and back pain due to bad posture. Also, students feel uncomfortable when they have a fever (feeling cold) or when they are sweating due to heat in the classroom.	The solution is to make an electronic smart chair for the classroom. - Posture Adjustment: The chair can automatically adjust and set the posture of the body to prevent neck and back pain.	Students
18	IDEA-2026-6MWU4Q	Pocket-Sized Inflatable Safety Airbag	Prajwal M M	T S Subbanna Sarvajanika High School	People traveling or swimming near water bodies often lack immediate flotation devices, increasing the risk of accidental drowning emergencies.	Attach a compact airbag inside clothing pockets or pants that inflates rapidly when needed. The mechanism expands into a full flotation device upon release, helping individuals stay afloat instantly during sudden water hazards.	Travelers, swimmers, tourists near lakes and rivers, and water sports enthusiasts.
19	IDEA-2026-79X2PA	JalRakshak - Water Predict	Sneha Santosh Patil	Swami Vivekananda CBSE School, Hukkeri	People usually find out that drinking water has a problem only after the water becomes visibly dirty, develops an unusual smell or after someone reports a problem. Regular laboratory testing is not always practical for every community water source because it takes time and needs equipment and trained people.	WATER-PREDICT is a small smart water-monitoring system that learns the normal condition of a particular water source and warns when its quality-related parameters begin to change unusually. A sensor unit can be placed near a community water tank, well, storage tank or other selected water source.	Rural communities, households depending on local water sources, schools, hostels, community water points and local authorities can benefit from the system. It can especially help communities where frequent laboratory testing of every water source is difficult.
20	IDEA-2026-79X2PA	JalRakshak - Water Predict	Sneha Santosh Patil	Swami Vivekananda CBSE School, Hukkeri	People usually find out that drinking water has a problem only after the water becomes visibly dirty, develops an unusual smell or after someone reports a problem. Regular laboratory testing is not always practical for every community water source because it takes time and needs equipment and trained people.	WATER-PREDICT is a small smart water-monitoring system that learns the normal condition of a particular water source and warns when its quality-related parameters begin to change unusually. A sensor unit can be placed near a community water tank, well, storage tank or other selected water source.	Rural communities, households depending on local water sources, schools, hostels, community water points and local authorities can benefit from the system. It can especially help communities where frequent laboratory testing of every water source is difficult.
21	IDEA-2026-7EGIB0	The Modular Foldable Helmet: An Affordable 3-Level Safety System	Yogesh H M		One important reason some youth and daily commuters may avoid wearing helmets is the inconvenience. Carrying a bulky helmet everywhere is annoying, and leaving it on a parked bike can lead to theft.	My idea is a foldable helmet designed to reduce its storage volume significantly and potentially fit into a backpack or compact storage space. When opened, it locks into a rigid protective structure.	Two-wheeler riders, especially youth, college students, and middle-class daily commuters in urban and semi-urban areas.
22	IDEA-2026-7IJEEB	The Smart Depression and Anxiety Assistant	Bhavika Aggarwal	Mahajana Public School	The Smart Depression and Anxiety Assistant	A small device that monitors stress or uneasy feelings, emits a beep sound, and guides the user to relax and practice calm breathing	Public

23	IDEA-2026-7NNGSV	Portable Smart Insole for Improving Children's Walking Posture and Sports Footwork Smart Heel-Contact & Foot-Angle Alert Device	Tanish Bhaskar	Seth Anandram Jaipuria School	Some children develop the habit of walking on their toes or not placing their heels properly on the ground. Some may also tend to place their feet excessively inward or outward while walking.	The proposed innovation is a thin, flexible and portable smart insole that can be placed inside a shoe or positioned near the heel under a sock. A Force Sensing Resistor (FSR) placed beneath the heel detects the pressure generated when the heel contacts the ground.	Provide immediate feedback to the child Increase awareness of heel contact and foot position Support the development of better movement habits Reduce the need for continuous observation by parents or coaches Be comfortably used inside normal footwear Be transferred from one shoe to another Support sports footwork and balance training Provide a practical and relatively low-cost technology solution
24	IDEA-2026-85G8PK	The Hands-Free Smart Shoe	Chirag S Dhananjay P. Kulkarni	Mahajana Public School	It is difficult for people who do not have hands to wear a shoe.	Use a leg sensor to create an automatic shoe belt. When a person puts their leg inside the shoe, the belt automatically closes.	Disabilities people
25	IDEA-2026-8SFDV0	A Wearable Solution for Monitoring Student Hydration Levels	Akash Bhuvan	Adarsha Pu college	Students are falling down and fainting in schools due to severe dehydration.	A smartwatch equipped with a specialized feature to monitor and display real-time body water levels.	Students
26	IDEA-2026-9GRYNG	GRAM-SHIELD	Ashrafali Abdulsab Multani (GramGuard)	Swami Vivekananda CBSE School , Hukkeri	In rural areas, during a medical emergency or disaster, the biggest problem is often not the complete absence of help but not knowing what help is available nearby at that exact moment. A hospital may be far away, an ambulance may already be occupied, a pharmacy may be closed, a blood donor may be available in the next village, or a usable vehicle may be nearby but unknown to the family.	GRAM-SHIELD is a simple mobile/web emergency network designed specifically for rural communities. It creates a live local map of available emergency resources.	Rural families, elderly people, patients, farmers, local health workers, panchayats, volunteers and emergency response teams can benefit from this system.
27	IDEA-2026-9ZLE4S	Child-Friendly Auto TV Shut-Off/On System	Mantesh AND sanjana	ghps nosenur	Many children watch television from a very close distance for long periods. This can cause eye strain, dry eyes, headaches, blurred vision, and long-term vision problems.	We propose a Child-Friendly Auto TV Shut-Off/On System using an Ultrasonic Distance Sensor and an Arduino Uno. 1.	The primary beneficiaries are children, parents, and caregivers. Children benefit by being encouraged to maintain a safe viewing distance, while parents and caregivers get an automatic system that helps monitor viewing distance even when they cannot supervise continuously
28	IDEA-2026-AD212X		Thileshan Gowda H P	JSS English Medium School Metagalli	Manual fish feeding is difficult during travel. Owners cannot verify if fish eat. Missing feeds harms aquatic health.	Attaches a timed sensor to the food box. It dispenses food automatically at set times.	Aquarium caretakers
29	IDEA-2026-AD8LLT	Capped Water Heater Safety Design	Ayan Ulla Khan	St Joseph's school, Rajiv Nagar	When someone puts an immersion heater in water, the water becomes hot. Children might not know the water is hot, touch it accidentally, and get burned or injured.	Make a water heater with a protective cap or cover mechanism to prevent accidental exposure and injuries.	Families with young children and households using immersion water heaters
30	IDEA-2026-BI1TWK	Fire Protection System for Oil/Gas Trucks Using Automatic Water Spray	Karthik M	Gopalaswamy High School	During summer, oil/gas trucks can become extremely hot, increasing the risk of fire or blast. If a fire starts in the truck, it can spread quickly and cause serious damage to the vehicle, driver, and surrounding area.	Develop an automatic water-spray fire protection system for oil/gas trucks. A water tank and spraying pipe will be installed near the truck cabin/fuel tank area.	Public

31	IDEA-2026-CQN56U	Smart Sensor Network for Emotion Detection and Suicide Prevention in Buildings	Kushal M Gowda	JSS English Medium School Metagalli	People experiencing severe emotional distress or interpersonal conflict sometimes attempt suicide in vulnerable spaces like building rooftops or dark, isolated areas. There is currently no automated system to detect these high-risk situations early enough to intervene and save lives.	Integrate smart emotion-tracking and motion sensors in critical areas of a building to detect abnormal behavior or distress. If someone approaches a rooftop edge or enters a dark space with a weapon, the system activates warning sound alarms, triggers bright lights to disrupt the action, and immediately alerts the police or emergency services for quick intervention.	Building managers, school administrators
32	IDEA-2026-DP1WUU	Under-Vehicle Animal Safety Sensor	Deekshith C	Shishkarni school	Stray animals (like dogs) frequently sleep underneath parked vehicles to find shade or rest. Drivers often start and move their vehicles without realizing an animal is underneath, leading to accidental injuries or fatalities.	Vehicles with proximit sensors underneath the chassis. These sensors will automatically detect the presence of animals or other living creatures and alert the driver before they start or move the vehicle.	Driver
33	IDEA-2026-DY7WHC	Droplex: Dual energy harvesting smart umbrella	Pratham nayak K		Every day, umbrellas are used to protect people from rain and sunlight, but the large surface area of an umbrella simply remains an unused surface. At the same time, people increasingly depend on portable electrical energy for basic needs such as emergency lighting and small electronic devices.	DROPLEX is a hybrid energy-harvesting umbrella designed to utilize two naturally available energy sources: sunlight and rainfall. The outer canopy incorporates lightweight flexible solar cells that generate electricity when exposed to sunlight.	This idea can benefit people who regularly spend time outdoors, such as students, daily commuters, street vendors, delivery workers and travellers. It can be especially useful in places that experience both strong sunlight and frequent rainfall. Instead of using an umbrella only for protection, DROPLEX gives it an additional purpose by exploring ways to generate and store small amounts of renewable energy for simple low-power uses like emergency lighting. In the long run, it could also encourage people to think differently about how everyday objects can be made more useful and sustainable.
34	IDEA-2026-E7Q2PH	Climate Intellisense x The complete farming essential	Dheeraj, Kruthin R Gowda	PM Shri Govt Adarsha Vidyalaya Mysuru South	We are solving the gap between technology and farming more convenient. Climate change is making farming more difficult.	Our solution is Climate IntelliSense X Climate IntelliSense X uses: IoT Sensors + AI + Cloud Technology Sensors collect information from the farm, such as: • Temperature • Humidity • Rainfall • Soil moisture • Groundwater level The data is analysed by AI. Then Climate IntelliSense X gives the farmer useful information such as: “Irrigate now.	Farmers agriculturists
35	IDEA-2026-E8VXEM	Assisted Bus Boarding Mechanism for Government Buses	Medhini.M and Eleena Uppara	Bharatiya Vidya Bhavan	In government buses, the steps are too high and heavy, making it difficult for people to climb easily. * Old people and small kids cannot climb easily and may fall down. * Passengers holding some belongings find it hard to climb.	Install a button system on buses where pressing a button causes steps to come down to help people climb easily without harming anyone, or alternatively, a slope-like thing could be done	Old People and Small Kids
36	IDEA-2026-ERMSKY	Smart Grass-Loader for Rural Bicycles	Yogesh M	Government Higher primary School Kurabaralli	Rural farmers struggle with severe physical strain and balance risks when manually lifting and balancing heavy, oversized grass bundles onto standard transport bicycles.	A mechanical, lever-assisted lifting arm is attached to the bicycle frame to help users easily lift and load heavy grass bundles onto the carrier rack. The mechanism reduces the physical effort required to lift and position the bundles, making transportation easier and safer.	Farmers and agricultural workers

37	IDEA-2026-F6FX2O	AI PROBLEM PATTERN FINDER	Ratna Maruti Gaddiwadar	Swami Vivekananda CBSE School, Hukkeri	Many small problems in a community are reported separately, so nobody notices that they are actually connected. For example, one person may complain about bad smell, another about mosquitoes, another about stagnant water and another about a blocked drain.	AI Problem Pattern Finder is a system that collects local problem reports from people through a simple mobile application. A person can report a problem by taking a photograph, selecting the location and writing or selecting a short description.	Local residents, panchayats, municipalities, sanitation workers, health workers, schools, community organisations and maintenance teams can benefit. It can help them identify recurring local problems and decide which issues need physical inspection or faster action.
38	IDEA-2026-FJYFX1	HANDPUMP HEALTH MONITOR	Pranav Vishwanath Nulimath, Achyut kiran Imagoudanavar	Swami Vivekanand CBSE School, Hukkeri	In many villages, handpumps are an important source of drinking water. A handpump usually continues to be used until it becomes very difficult to operate or stops giving water completely.	HANDPUMP HEALTH MONITOR is a small, low-cost monitoring system that learns the normal working behaviour of a handpump and detects changes that may indicate developing problems. Sensors attached to the handpump can record parameters such as the number and speed of pumping strokes, movement of the handle, approximate water flow and usage pattern.	People in rural communities who depend on handpumps for drinking and household water will benefit directly. Village authorities, local maintenance workers, panchayats and organisations responsible for rural water infrastructure can use the system to identify pumps that require inspection before they fail.
39	IDEA-2026-GQG39G	Automated Wall-Mounted Furniture Lifter & Levitation System	Himashree N	RVPB Pu college	Cleaning under heavy furniture requires dragging large items, which is difficult for a single person	Wall-mounted/Button-operated Lift A mechanism attached to the wall that uses a button to raise and lower furniture via a support stand.	Everyone
40	IDEA-2026-GS5A8J	Safe Sense Door	Ranya Jain	Navkis Educational center Mysore	Safe Sense Door is designed to reduce accidents caused by doors that close unexpectedly or too forcefully. Strong wind: A door may suddenly slam because of Wind finger/hand injuries: Someone's hand or fingers may be in the closing gapUnexpected closing: A person may not have enough time to react.	SafeSense Door is a smart door-safety system designed to prevent accidents caused by sudden or forceful door movement. The system uses wind and obstacle sensors.	SafeSense Door benefits everyone, especially children, elderly people, and people with limited mobility, by making doors safer through wind detection, obstacle sensing, automatic stopping/reversing, alerts, and voice control.
41	IDEA-2026-H0FZP4	Tri-Wheel Stair-Climbing Suitcase	Ullas, Jeevan	Govt. High School, Vontikoppal	When traveling, passengers often struggle to carry heavy luggage across areas without ramps or elevators. Lifting a heavy suitcase up flights of stairs requires significant physical effort, leading to exhaustion, strain, or accidental drops and damages.	The solution is to modify a standard travel suitcase by fitting a specialized three-wheel (tri-wheel) mechanism on each side instead of a single wheel.	Travellers
42	IDEA-2026-H9IWEN	Clap-Activated Automatic Open Dustbin	Nilay	Pragathi Elite Public School	People have to open and put waste in the dustbin by hand, and people hate touching dirty surfaces in public toilets or public bins.	A dustbin that opens automatically by itself when you clap	General public and users of public restrooms or public bins
43	IDEA-2026-IAVE1U	AGRISENTINEL—Intelligent Agricultural Sentinel for Crop Protection	Ruben Santhosh	Navajeevan Bethany Vidyalaya	Farmers, especially those farming near forests and wildlife habitats, face major crop losses when wild animals enter their fields. Animals such as elephants, wild boars, deer, and other crop-damaging animals can destroy crops within a short time.	nan	
44	IDEA-2026-IOOIZI	Automated Air-Puff Smart Glasses for Dry Eye Syndrome	Anirudhanantha g p	vijaya vittala vidyashala	Prolonged use of smartphones, computers, and other digital screens reduces the natural blinking rate of the eyes. This causes the tear film on the eye surface to evaporate, leading to dryness, burning, redness, irritation, and temporary blurred vision.	About 344 million people suffer from dry eye syndrome. You may have noticed that when we are watching TV or phone we almost do not blink at all.	If we use this glass we solve 60-75% of one of the most major problems on Earth which is screen time-eye problem. If we are suffering from this much problems for using it for 3 hours a day imagine the problems happening to developers, software engineers and all types of computer related workers who have to use it for at least 6 hours a day.

45	IDEA-2026-KXHV5L	Dual-Door Washing Machine for Colored and White Clothes	Kanashi Kaveramma M N Aadya M V	ST Joseph School Vijaynagar	When washing colored clothes along with white clothes together, the white clothes get stained by the color.	Create two separate compartments inside the washing machine—one for colored clothes and one for white clothes. Each compartment has its own door so clothes can be washed and removed separately without mixing.	Families, hostellers, and people doing daily laundry.
46	IDEA-2026-L69R5I		Fihoul Tanzeem	Govt. Higher Primary School	Falling coconuts from mature palm trees pose a severe safety hazard to pedestrians and risk causing expensive structural damage to parked vehicles below.	Design and install a specialized resistant collector net or basket system around the upper trunk of the coconut tree to safely intercept and hold falling cocunut before it reaches the ground.	Farmer
47	IDEA-2026-LC0JXN	Rain water collector in window	Aarnav S (AP) 1st	St. Joseph Central school, Vijayanagar	When we go outside and forget to close the window, rainwater can enter through the open window and make the floor wet.	A water collector can be attached below the window to collect the rainwater entering through the open window. This prevents the water from falling directly onto the floor and keeps the floor dry.	Home, school
48	IDEA-2026-O2KS25	LifeLens AI	Harshvardhan	JAYCEES PUBLIC SCHOOL RUDRAPUR	Millions of people face emergencies every day because warning signs often go unnoticed or are detected too late. Whether it is an elderly person falling at home, a child left alone in an unsafe place, a fire starting from an electrical fault, or someone experiencing a medical emergency, help usually arrives only after the incident has already become serious.	LifeLens AI is an AI-powered smart safety platform that continuously monitors its surroundings using cameras and sensors to identify potential dangers before they become serious emergencies. Instead of reacting after an accident happens, the system focuses on early detection and prevention.	LifeLens AI is designed to improve safety for a wide range of users, including: Families and Households – Early detection of accidents such as falls, fire, smoke, gas leaks, or other emergencies, helping keep loved ones safe. Schools and Educational Institutions – Enhances student safety by identifying emergencies and sending instant alerts to school authorities. Senior Citizens – Monitors elderly people living alone and detects falls or unusual behaviour, allowing faster assistance. Hospitals and Care Centres – Supports staff by monitoring patients and identifying emergency situations in real time. Businesses and Offices – Improves workplace safety by detecting hazards and reducing the risk of accidents. Public Places – Can be deployed in railway stations, bus terminals, shopping malls, parks, and other crowded areas to enhance public safety. Emergency Response Teams – Provides faster and more accurate alerts, enabling quicker action during emergencies. Overall Impact LifeLens AI aims to create safer homes, schools, workplaces, and public spaces by detecting risks early, reducing response time, preventing accidents, and ultimately helping save lives.
49	IDEA-2026-PMIZO8	WASTE HOTSPOT PREDICTOR	Poorvi Sadashiv Magadum, Mariya Usmangani Bagwan	Swami Vivekananda CBSE School, Hukkeri	In many streets and public places, waste is noticed only after a garbage pile has already formed. Cleaning teams usually respond to complaints or follow fixed collection schedules.	Waste Hotspot Predictor is a system that learns the waste pattern of different locations and predicts where waste is likely to accumulate next. A mobile app can be used to report waste by taking a photograph and selecting the location.	Residents, sanitation workers, local bodies, municipalities, panchayats, schools, markets and waste-collection teams can benefit from the system. Residents benefit from cleaner public spaces, while cleaning teams can use their available time and vehicles more efficiently.
50	IDEA-2026-PQ99H2	Weak Railing and Metal Net Warning Sensor System	Shazmeen Mahedi	Navkis Educational centre	People lean on railings, metal, or iron nets in schools, hospitals, and other places that might be weak and dangerous.	Install a sensor or an alarm on railings and other metal or iron net structures to alert people not to lean on them because they might be weak.	Students, hospital patients, and general visitors

51	IDEA-2026-PR5DRO	Smart Ambulance Traffic Signal System	Ashith A S	BVB School	Ambulances carrying critical patients often get stuck in heavy traffic, causing delays in reaching the hospital and potentially putting patients' lives at risk.	A wireless ambulance signal system can allow the ambulance driver to send a signal to nearby traffic signals. The system will detect the approaching ambulance and automatically give it a clear route by changing the traffic signal, helping the ambulance reach the hospital faster.	Public
52	IDEA-2026-R08X42	Health ATM	Vishrutha M Gowda	bharatiya vidya bhavan	Many people, especially those living far from hospitals or in crowded areas, face difficulty visiting hospitals regularly for basic health check-ups.	The Health ATM is a self-service health-checking machine that can perform basic tests such as blood pressure, oxygen level, and weight. It can provide the results instantly and alert the user to consult a doctor if any abnormal results are detected.	Public
53	IDEA-2026-S2U9YN	Smart blind corner safety system	Mohammed unes	G.H.S Hanchya	In school corridors, students often run or walk quickly without being able to see people coming from the opposite side, especially near corners. This can lead to students bumping into each other and getting injured.	Smart blind corner safety system tha combines a convex safety mirror with motion sensors and audio alerts. The convex mirror provides a wider view of the approachig corridor, while sensors detect students approaching from both directions.	School, Building
54	IDEA-2026-TCS06Y	Sweat-Absorbing Pen Gripper/Tape	Unnathi N Kumar	St. Joseph Central School, vijayanagar	Many people experience sweaty hands while writing or drawing, which can make their fingers slippery and uncomfortable. This may affect their grip, handwriting, and writing accuracy	Develop a sweat-absorbing gripper/tape for pens and pencils. The material can absorb moisture from the fingers and provide a comfortable, non-slip grip, helping users write properly without their fingers slipping.	students
55	IDEA-2026-TWAX09	3 MINUTE SMART WATER SAVER	Ranya Jain	Navkis Educational Center Mysore	It solves the problem of water leakage which prevents water wastage.This problem affects all types of people and is very common which leads to a wastage of water in a large amount.	My idea is a smart device which can be used to save water and prevent leakage. It detects continues abnormal water flow.	Common people will benefit from it .It will save a lot of water and instead of shutting down whole water system it only shuts down the tap.
56	IDEA-2026-TWWK1R	Solar filter water from factory	Shahid Khan	Rajiv Gandhi Education School	Factory waste are directly let out to the river. fishes aquatic life species & die by consuming that water.	Filter the water using electricity or solar energy.	Public
57	IDEA-2026-URN5MB	Transparent Visible Water Tank	Varun H R	JSS English Medium School Metagalli	In conventional water tanks, we cannot see the water levels and accumulated dust inside the tank.	Manufacture and market transparent water tanks so people can easily see the dust and monitor the water levels to fill it.	Homeowners, Apartments , Industries and factories
58	IDEA-2026-VSC5H5	Flexible Silicone Frame Extension for Reading Glasses	Tanvi Gowda N M	Government Adarsh Vidyalaya Nanjangud	People who wear reading glasses struggle to read comfortably while lying down, as rigid frame arms press painfully against the head or break when resting on a pillow.	Attach flexible, expandable silicone arms to the spectacle frame that bend effortlessly in any direction. The bendable material adjusts to body position, allowing users to lie sideways or read in bed without discomfort or damaging the glasses.	Spectacle users, avid readers, elderly individuals, and bedridden patients.
59	IDEA-2026-WCP3MN	suicide prevention fan	Nithesh Gowtham	Govt. High School	In an emergency situation involving a person attempting suicide by hanging from a ceiling fan, it can be difficult for family members to notice the situation and provide help quickly. This may delay emergency assistance.	I propose a smart fan safety system with a weight/load sensor. If the system detects an unusual or dangerous load, it can immediately trigger an alarm and send an emergency message to a registered phone number.	hostel, home

60	IDEA-2026-WJKJG6	Regenerating Multi-Climate Dew-Operating Cooling System	Faaz	Interactive World School, Yadalli, Sirsi	"Normal air coolers are less effective in humid climates because the air already contains more moisture. Air conditioners consume a lot of electricity and can have environmental impacts due to their refrigerants.	"Our system uses silica gel to dehumidify the air before evaporative cooling. Two silica-gel chambers automatically switch and regenerate using PTC heating elements controlled by Arduino.	public
61	IDEA-2026-WSQXEK	Desk-Attached Mini Waste Collection Pouches	Srinika S. P	Pragathi Elite Public School	During the school day, students generate a significant amount of small waste right at their desks. This mostly includes pencil shavings from sharpening and paper scraps from art and craft activities.	The school should have a mini dustbins or flexible waste collection pouches to attach directly to each student's bench.	Students
62	IDEA-2026-XKNO24		Mahadev Prasad S		Construction workers working on top floors of buildings are at high risk of serious injuries or death if they accidentally fall from a height. Existing safety measures may not always provide immediate protection during a fall.	Develop a wearable safety airbag system for construction workers. The system can detect sudden falling movement using sensors and automatically deploy an airbag around the worker to reduce the impact and protect them from serious injuries.	Construct worker
63	IDEA-2026-XY0D3J	Container-Attached Paint Brush	Muhammed Hassain	St. Joseph's School Rajiv Nagar	When painting on a wall, paint falls or drips onto the floor, and it is difficult to remove.	Add a container to a brush stick to catch dripping paint before it spills onto the floor.	Painters, homeowners, and interior decorators
64	IDEA-2026-YHXUHN	A wearable beard hair collector for mess-free grooming.	Adithya Babu R	St maria de mattias	Shaving facial hair causes loose trimmings to fall all over the sink and floor, creating a messy cleanup.	Use a specialized hair collector device positioned underneath the beard to catch trimmings as they fall.	CUtting shop
65	IDEA-2026-Z2PC3E	Smart anti drowning pool alarm system	Lisha P	Shishkarni School	While swimming many people will drown. Even through if they scream for help nobody can hear them.	Automatic alarm system designed to prevent drowning by detects when a swimmer is in distress.	Swimmers
66	IDEA-2026-ZIZ18C	tree market ai	Arun Rathaur	jawahar navodaya vidyalaya pilibhit	Farmers often struggle to find fair and transparent prices for trees and timber, while buyers have difficulty finding suitable trees and reliable sellers in their region. Local mandi rates and market information can also be scattered or difficult to access.	TreeMarket AI is an AI-powered digital marketplace that connects farmers, tree owners, timber buyers, and local markets. Users can list trees with details such as species, location, size, and photos.	The main beneficiaries are **farmers and tree owners**, who can find buyers and access regional mandi rates and price information. **Timber buyers, traders, sawmills, and local businesses** can discover available trees and suppliers more easily. The platform can also benefit **rural communities** by making the tree-timber market more transparent, accessible, and digitally connected.
67	IDEA-2026-A38P3D	SOLAR PANEL “CLEAN ME” INTELLIGENCE	Aditi Ravindra Patil	Swami Vivekananda CBSE School, Hukkeri	Solar panels gradually lose efficiency when dust, bird droppings, leaves and other dirt collect on their surface. But normally panels are cleaned according to a fixed schedule or only when someone notices that they look dirty.	This idea is a small smart system that continuously checks whether a solar panel is performing as expected and tells the user when it actually needs cleaning. The system measures the panel's electricity output and compares it with conditions such as sunlight intensity and temperature.	Homes, schools, small solar installations, farmers, shops, offices and people maintaining rooftop solar panels can benefit. It can especially help places where cleaning many panels regularly requires considerable water and manual effort.
68	IDEA-2026-FW322V	ECO COOLER 2.O	LIKITH	HPS NOSENUR	During summer, temperatures inside homes and classrooms become extremely high, especially in rural and low-income communities. Many families cannot afford air conditioners due to their high purchase and electricity costs.	EcoCooler 2. 0 is a smart passive cooling device built using recycled plastic bottles mounted on a window panel.	Primary beneficiaries: Students, teachers, low-income families, rural communities, and people living or working in rooms that become very hot. It is especially useful for schools, small homes, classrooms, and community spaces where air-conditioning is expensive or electricity supply is limited.
